The DeWalt is similar to the Metabo in design. It can be used one- or two-handed and has a detachable front handle with a choice of two mounting positions. The top of the machine is entirely covered in soft-grip rubber padding and the variable speed wheel is mounted on the front edge.

It has two sanding actions, and these are selected using a button on the base. Unusually, two dust bags are supplied. One

is a large disposable paper bag which sits in a dedicated plastic frame and is ideal when sanding large surfaces. The smaller cylindrical cloth bag is intended for use when the larger bag would be inconvenient. The machine can be connected directly to a dust extractor, if required.

In use the DeWalt is smooth and efficient. The choice of sanding orbit size gives it great versatility, and it is comfortable to use in both modes.
